ABDUL HADI ADNAN

AI Quality Analyst | GenAI Evaluation Specialist | Prompt Engineering and Model Assessment
Lahore, Pakistan • 0332-3322337 • abdulhadiadnan1080@gmail.com • github.com/abdulhadiadnan1080

AVAILABILITY AND WORK SETUP

Schedule: Available full-time (up to 40 hours/week) with minimum 4 hours daily and 4+ hours of daily overlap with Pacific Time (PST/PDT). Based in Lahore (UTC+5).
Engagement and Setup: Open to 3-month contractor engagement. Desktop and laptop with reliable high-speed internet. Experienced working independently across time zones.
Personal Account Usage: Willing to use primary personal Google account (Gmail, Google Search, YouTube, and Gemini history enabled) for genuine personalization assessment. Not a testing account.

PROFESSIONAL SUMMARY

Analytical and detail-oriented GenAI specialist with hands-on experience evaluating frontier models including Gemini-family systems. Proven track record in model quality control, data annotation, fine-tuning assessment, creative multi-turn (1 to 5 turn) prompt design, and rigorous evaluation of AI responses for grounding accuracy, natural integration of context, and overall helpfulness. Skilled at identifying flawed inferences, hallucinations, forced connections, and over-narration. Experienced writing clear structured rationales and detailed annotations using evaluation rubrics. Strong English proficiency (focus language) with superior written communication. Maintains strict data hygiene by deleting evaluation conversations to keep chat history clean and prevent context contamination between tasks.

PROFESSIONAL EXPERIENCE

Software Engineer / Technical Owner | Devsinc | 2025 - 2026

- Led GenAI system design and systematic evaluation of frontier models (Anthropic, Meta, OpenAI, Grok, Ollama) for client-critical applications, assessing response quality, grounding, source attribution, and helpfulness.
- Designed and executed multi-turn conversational flows (typically 1 to 5 turns) testing accurate context integration without forced or incorrect personalization.
- Wrote clear production runbooks, documentation, and structured evaluation notes with explicit reference to specific behaviors, turns, and outcomes.
- Extracted and verified model debug information, chat summaries, and data source usage to confirm proper utilization of context and supporting evidence.
- Built automated compliance and governance pipelines supporting consistent quality standards and safe evaluation environments.

Selected Evaluation and Delivery Projects

- Bank GenAI Default-Prevention Pipeline: Designed and evaluated full processing pipeline using Amazon Bedrock. Assessed outputs against bank and regulatory policies for accuracy and grounding. Handled 88,000 users with tight quality controls.
- Scalable Cognitive Chatbot Platform: Re-architected and evaluated conversational system for natural response quality, context integration, and helpfulness. Scaled from 1 to 100 concurrent users and 110,000 interactions/month with sub-3-second processing and high response fidelity.
- Predictive Extraction and Onboarding Pipelines: Designed LLM-powered pipelines and evaluated outputs for correct inference, grounding to source data, and natural integration without over-narration or forced connections.
- Developer Sandbox and Governance Systems: Created isolated evaluation environments and automated quality policies for safe, consistent testing of model behavior prior to production release.

Independent Contractor / Freelance Cloud and GenAI Engineer | 2021 - 2025

- Progressed from hands-on model quality control, data annotation, and fine-tuning assessment on frontier models (including Gemini-family work) to Pod Lead managing a team of 5 focused on model quality and evaluation standards.
- Designed creative multi-turn prompts (1 to 5 turns) based on real-world and personal-context use cases to test personalization, grounding, and response naturalness.
- Performed detailed side-by-side (SxS) analysis using structured evaluation rubrics, identifying differences in naturalness, over-narration, incorrect personalization, poor inferences, and hallucinations.
- Wrote clear structured rationales and detailed annotations for model quality rankings, referencing specific response elements and conversation turns.
- Verified debug metadata, chat summaries, and data source attribution to confirm proper utilization of personal and historical context by the model.
- Led AI compliance remediation for EU AI Act, Colorado AI Act, and related frameworks. Redesigned evaluation pipelines to meet regulatory and ethical quality standards.
- Delivered production GenAI systems and evaluation frameworks for regulated clients (Healthcare, Fintech, Legal, Banking) under NDA, with strict data hygiene (deleting evaluation sessions to prevent history pollution) and independent remote delivery.

EDUCATION

Bachelor of Science in Computer Science (BSCS) | Forman Christian College University | Early 2026

Coursework: Machine Learning and Deep Learning. Multiple international academic programs abroad. Exchange Student - Data Science, Lingnan University, Hong Kong.

KEY QUALIFICATIONS

English Proficiency: Native-level professional English with high degree of competence in reading and writing. Superior written communication shown through clear, concise, structured rationales, evaluation reports, production runbooks, and detailed annotations. English is the primary working language for all evaluation and documentation.
Evaluation and Annotation: Hands-on data annotation, AI quality evaluation, structured evaluation rubrics, side-by-side (SxS) ranking, content quality assessment, and constructive feedback delivery.

TECHNICAL AND EVALUATION SKILLS

AI Evaluation and Quality: Model quality control, data annotation, fine-tuning assessment, creative multi-turn (1-5 turn) prompt engineering, side-by-side (SxS) response ranking, grounding analysis, integration quality assessment, identification of hallucinations and flawed inferences, naturalness and over-narration review, structured evaluation rubrics, detailed annotations, structured rationales
Debug and Traceability: Extraction and verification of debug info, chat summaries, data source usage confirmation, source attribution, and metadata inspection to validate proper context utilization
LLMs and Frontier Models: Gemini-family systems, Anthropic, OpenAI, Meta, Grok, Ollama. Experience evaluating personalization, context utilization, and response helpfulness
Analytical and Communication: Exceptional analytical thinking for nuanced AI responses, meticulous attention to detail, clear concise written English, constructive feedback, independent remote work, strict data hygiene (deleting evaluation conversations to prevent history pollution)
Supporting Technical: Amazon Bedrock, Lambda, SageMaker, MLOps, Knowledge Graphs, AWS and multi-cloud, compliance frameworks (EU AI Act, Colorado AI Act, California AI Act, HIPAA)

CLIENT AND PROFESSIONAL SKILLS

Creative prompt design from personal and real-world context • Rigorous evaluation of personalization quality • Clear structured rationales referencing specific turns • Excellent written and spoken English • Independent remote work with high self-motivation • Cross-timezone collaboration • Detailed annotation and constructive feedback • Strong attention to data hygiene and evaluation consistency
