# ABDUL HADI ADNAN

Software Engineer | AI Quality and Evaluation Specialist | Technical Delivery and QC Owner
Lahore, Pakistan • 0332-3322337 • abdulhadiadnan1080@gmail.com • github.com/abdulhadiadnan1080

## AVAILABILITY AND WORK SETUP

**Schedule:** Available full-time (up to 40 hours/week) with minimum 4 hours daily and 4+ hours of daily overlap with Pacific Time (PST/PDT). Based in Lahore (UTC+5).
**Engagement and Setup:** Open to 3-month contractor engagement. Desktop and laptop with reliable high-speed internet. Experienced working independently across time zones.
**Personal Account Usage:** Willing to use primary personal Google account (Gmail, Google Search, YouTube, and Gemini history enabled) for genuine personalization assessment. Not a testing account.

## PROFESSIONAL SUMMARY

Practicing software engineer and technical owner with strong fundamentals and hands-on experience in Quality Control, AI/data evaluation, and end-to-end project delivery. Led technical design and delivery for regulated clients while owning model quality evaluation, structured rubrics, verifiers, and high-volume annotation workflows. Experienced assessing technical correctness independently, designing multi-turn evaluation tasks (1 to 5 turns), and determining whether outputs and verification mechanisms meet a high quality bar. Strong English proficiency with superior written communication. Comfortable working independently in remote settings with strict data hygiene.

## PROFESSIONAL EXPERIENCE

**Software Engineer / Technical Owner | Devsinc | 2025 - 2026**

- Owned end-to-end technical design and delivery for multiple client projects in banking and regulated domains, from requirements discovery through production, with final accountability for quality and correctness.
- Led GenAI system design and systematic evaluation of frontier models (Anthropic, Meta, OpenAI, Grok, Ollama), assessing response quality, grounding, source attribution, and practical helpfulness against a high quality bar.
- Designed multi-turn evaluation flows (typically 1 to 5 turns), structured rubrics, and quality checks to test context integration, personalization accuracy, and detection of flawed inferences or over-narration.
- Extracted and verified model debug information, chat summaries, and data source usage. Wrote clear structured rationales and evaluation notes referencing specific behaviors and turns.
- Built automated compliance and governance pipelines (including AWS Custodian) supporting consistent quality standards, safe evaluation environments, and full auditability.

**Selected Delivery and Evaluation Projects**

- Bank GenAI Default-Prevention Pipeline: Owned technical design and evaluation of full processing pipeline (Amazon Bedrock + Lambda + Iceberg). Assessed model outputs against bank and regulatory policies for accuracy and grounding. Handled 88,000 users with tight quality and cost controls.
- Bank Backend Regional Migration: Owned technical design and delivery of a full regional backend migration (5-month engagement). Reduced monthly cost from $45,000 to $22,000. Zero-downtime cutover in 2 days with on-the-spot issue resolution.
- Scalable Cognitive Chatbot Platform: Re-architected single-EC2 system into a scalable, secure AWS platform. Evaluated natural response quality, context integration, and helpfulness. Scaled from 1 to 100 concurrent users and 110,000 interactions/month with sub-3-second processing.
- Developer Sandbox and Governance Systems: Designed isolated evaluation environments and automated quality policies so teams could safely test and verify before production release.

**Independent Contractor / Freelance Cloud and GenAI Engineer | 2021 - 2025**

- Progressed from hands-on model quality control, data annotation, and fine-tuning assessment on frontier models (including Gemini-family work) to Pod Lead managing a team of 5 engineers responsible for model quality, capability improvements, and consistent evaluation standards.
- Designed creative multi-turn prompts (1 to 5 turns) and evaluation scenarios based on real-world and personal context. Performed side-by-side (SxS) ranking using structured evaluation rubrics covering grounding, integration, naturalness, and helpfulness.
- Owned the QC and verification function for evaluation work: created and refined rubrics, test cases, and quality checks. Independently assessed technical correctness rather than relying only on automated results.
- Wrote clear structured rationales and detailed annotations for model quality rankings, referencing specific response elements and conversation turns. Verified debug metadata, chat summaries, and data source attribution.
- Led AI compliance remediation for clients adapting to EU AI Act, Colorado AI Act, and related frameworks. Redesigned evaluation pipelines and governance to meet regulatory quality standards.
- Delivered production GenAI systems, computer vision solutions, and cloud architectures for regulated clients (Healthcare, Fintech, Legal, Banking) under NDA. Implemented full Infrastructure as Code (AWS CDK + Terraform). Maintained strict data hygiene by deleting evaluation sessions to prevent history pollution.

## EDUCATION

**Bachelor of Science in Computer Science (BSCS) | Forman Christian College University | Early 2026**

Coursework: Machine Learning and Deep Learning. Multiple international academic programs abroad. Exchange Student - Data Science, Lingnan University, Hong Kong.

## KEY QUALIFICATIONS

**English Proficiency:** Native-level professional English with high degree of competence in reading and writing. Superior written communication through clear, concise, structured rationales, evaluation reports, production runbooks, and detailed annotations. English is the primary working language.
**QC Ownership and Technical Judgment:** Experience owning the QC and verifier function. Designed, reviewed, and improved rubrics, test cases, verifiers, and quality checks. Independently assessed technical correctness and final quality decisions.
**Evaluation and Annotation:** Hands-on data annotation, AI quality evaluation, structured evaluation rubrics, side-by-side (SxS) ranking, content quality assessment, and constructive feedback delivery.

## TECHNICAL AND EVALUATION SKILLS

**Software Engineering and Delivery:** System design, API design, event-driven patterns, microservices, full Infrastructure as Code (AWS CDK + Terraform), AWS (Bedrock, Lambda, Step Functions, SageMaker, VPC, IAM, Custodian), multi-cloud, Agile/DevOps practices
**AI Evaluation and QC:** Model quality control, data annotation, fine-tuning assessment, creative multi-turn (1-5 turn) prompt engineering, side-by-side (SxS) ranking, grounding analysis, integration quality, hallucination and flawed-inference detection, structured evaluation rubrics, verifiers, test cases, detailed annotations, structured rationales
**Debug and Traceability:** Extraction and verification of debug info, chat summaries, data source usage confirmation, source attribution, and metadata inspection
**LLMs and Frontier Models:** Gemini-family systems, Anthropic, OpenAI, Meta, Grok, Ollama. Experience evaluating personalization, context utilization, and response helpfulness
**Analytical and Soft Skills:** Exceptional analytical thinking, meticulous attention to detail, clear written English, constructive feedback, independent remote work, strict data hygiene (deleting evaluation conversations to prevent history pollution), cross-timezone collaboration, team leadership (pod of 5)
